

## REACH STATEMENT

Graphic PLC's printed circuit boards are classed as articles and do not contain any substances that require registration under REACH.

The boards contain none of the 173 substances on the Candidate List of Substances of Very High Concern (updated 12 January 2017) above the concentration limit of 0.1% by weight. A statement to this effect appears on all quotations and certificates of conformity leaving Graphic.

To ensure continuity of supply Graphic has obtained assurances from its suppliers that all substances used by Graphic in the production process, or by suppliers in their production processes, have, where appropriate, been pre-registered at the European Chemicals Agency for use in the production of printed circuit boards.
